

Dear Parents,

To help students learn their basic addition facts with sums up to 18 we are going to be working towards an ice cream party. Each day students will start math class by taking a short, timed test. When students correctly answer all the questions on their test in the time allotted, they will pass to the next level and earn an ice cream topping for their sundae. Please see below for the levels students will be working on and their corresponding ice cream topping.

Addition Facts	Ice Cream Topping
0-3	Bowl of vanilla ice cream
4-6	Carmel
7-9	Hot fudge
10-14	M & Ms
15-18	Sprinkles

Our ice cream party will take place on Feb. 22 since Lent starts the next day. Please help your child practice their math facts at home so they can create a delicious ice cream sundae during our ice cream party. Of course, memorizing their basic math facts will also help students more quickly complete math problems which will be especially helpful when we start our three digit addition unit this spring.

Blessings,

Ms. Befort
